

Life Guide 2025 – What’s coming up

Life & Health Underwriters worldwide rely on Life Guide to make informed decisions that build resilient and thriving portfolios. Our dedication to excellence drives us to review and enhance Life Guide annually, ensuring you have the most current and comprehensive evidence at your fingertips. This year, we are introducing industry-leading technological advancements designed to elevate your user experience. Here’s what’s coming in 2025. Life Guide has you covered.

Content updates

A selection of rating page updates and improvements will be implemented in August.

Key evidence-based research topics:

- Weight loss medications
- Longevity medications

New pages:

- Albumin Globulin ratio rating guidance
- Globulin rating guidance
- Ligament injuries including Achilles tendon rupture

Feedback generated change topics

- Albumin (serum)
- Ankle joint diseases
- Aortic aneurysm
- Benign breast conditions
- Blindness
- Burgada syndrome
- Bursitis
- Chronic kidney disease (CKD)
- Dislocation
- Exercise electrocardiogram
- Fractures
- Haematuria
- HDL cholesterol
- Hepatitis B
- Hip disorders

- Knee disorders
- Oesophageal obstruction
- Oesophagitis
- Proteinuria and microalbuminuria
- PSA abnormalities
- Refractive and other impairments
- Shoulder disorders
- Sideroblastic anaemia
- Spinal Fracture
- Subarachnoid haemorrhage and unruptured cerebrovascular problems
- Tenosynovitis

Feedback generated change topics:

- AMSAD N.A
- New Cancer only pages (introduction of cancer only rating guidance for 47 existing medical topics in Life Guide). Live in January 2025.

Calculators:

All remaining calculators will be transitioned to the same interface as the CMC and CAD calculators. During this process, we are taking the opportunity to address some minor feedback items relating to usability and rating guidance for CKD, such as the inclusion of 24-hour protein excretion.
