Swiss Re Ltd

Swiss Re Ltd is the holding company for the Swiss Re Group. Its shares are listed on the SIX Swiss Exchange and trade under the symbol SREN.

Walter B. Kielholz
Chairman of the Board of Directors

Stefan Lippe
Chief Executive Officer

Net income for the quarter was USD 960 million, which means a return on equity of 15.6%. All segments contributed to this positive result.

Dear shareholders

Today, we are pleased to report a strong performance for your company in the second quarter of 2011. The net income for the quarter was USD 960 million, which means a return on equity of 15.6%. All segments contributed to this positive result thanks to disciplined underwriting, prudent investment strategies and our ability to deliver tailored solutions for our clients. Our strong renewals in 2011 are confirmation of Swiss Re's growth prospects.

Shareholders' equity increased to USD 24.8 billion

Swiss Re reported net income of USD 960 million for the second quarter of 2011. Earnings per share were USD 2.80 (CHF 2.55). Shareholders' equity rose to USD 24.8 billion, more than offsetting the dividend payout to our shareholders during the second quarter of 2011 of approximately USD 1.0 billion. Return on equity increased to 15.6%.

Strong financial results across all segments, excellent P&C combined ratio

Property & Casualty delivered excellent operating income of USD 993 million and an excellent combined ratio of 78.4%. The increase in operating income was driven by strict underwriting, favourable net development of prior accident years and lower large loss experience in the quarter. Premiums earned increased 12.6% (or 7.1% at constant foreign exchange rates), reflecting strong renewals and also new business written in the first half of 2011.

Life & Health reported solid operating income of USD 161 million, driven by favourable morbidity trends. This was partly offset by additional Admin Re[®] expenses of USD 57 million, including cost from restructuring. The benefit ratio was 87.0% in the second quarter of 2011.

Asset Management performed very well in a volatile market. Operating income was USD 1.3 billion, driven by higher investment income from government and corporate bonds and mark-to-market gains in equity and alternative investments. The annualised return on investments was 4.3% and the annualised total return on investments was 8.1%.

The volatility of financial markets in the wake of recent sovereign debt issues in Europe continues to be a concern. After starting to take resolute steps from late 2009 to reduce sovereign debt exposure to non-AAA rated European government bonds, Swiss Re now holds only USD 78 million in sovereign debt issued by peripheral eurozone countries. Our exposure to Greek sovereign debt is nil.

Strong July 2011 renewals leading to earnings growth

While enjoying improved market conditions and a firming price environment, we continue to focus on disciplined underwriting. In the July 2011 renewals, which covered approximately 18% of Swiss Re's Property & Casualty treaty book, we achieved top-line growth of 8%. Risk-adjusted price adequacy for business renewed in July improved by 5 percentage points. We accomplished this increase in volume and pricing mainly through our ability to respond to higher demand for natural catastrophe cover in Australia, New Zealand and the United States. We also succeeded in completing Property & Casualty run-off transactions at attractive rates, but stayed defensive on Casualty business whenever prices did not meet our requirements.

You will be pleased to learn that in the course of 2011 renewals, we have maintained the high quality of Swiss Re's portfolio. Year-to-date, Swiss Re's treaty portfolio increased by a total of USD 2 billion or 20% to USD 12.2 billion. Strongest growth originated in Asia.

The reinsurance market has started to turn, and we expect further improvements over the next 6 to 18 months.

Progress made on financial targets and new structure, continued focus on innovation

During the second quarter we made good progress towards achieving Swiss Re's five-year financial targets, which we announced in February 2011. These targets are our most important priority and we are fully focused on achieving them.

In a rapidly changing world, customer needs evolve. Swiss Re strives to develop innovative solutions for clients, in order to support them in refocusing their activities. In the second quarter, the company was able to conclude successful Admin Re[®] and Property & Casualty run-off transactions. Furthermore, we work closely with partners in the public sector to develop innovative solutions that help to increase societal resilience and enable economic growth.

We are making good progress in the transition to Swiss Re's new holding structure as we seek to enhance our focus on clients, increase capital efficiency and improve transparency for all our stakeholders. This process began with the share exchange offer, first announced on 17 February 2011 and declared successful on 18 May 2011.

More than 98% of shares in Swiss Reinsurance Company Ltd ("SRZ") were held by or had been tendered to Swiss Re Ltd ("SRL") by 9 June 2011. SRL filed a request with the competent court to invalidate the remaining SRZ shares. Once the court approves this request, the remaining SRZ shares will be immediately delisted, as confirmed by the SIX Swiss Exchange. Holders of invalidated shares will receive one SRL share for each SRZ share, subject to applicable securities law restrictions.

As a further step, we are aligning our leadership structure to reflect the Group's new legal entity set-up. Christian Mumenthaler has been appointed CEO of the reinsurance subsidiary Swiss Reinsurance Company Ltd (SRZ), taking charge of the Group's reinsurance strategy as well as its entire business performance, including financial results, capital and asset allocation, along with governing the legal entities comprised within SRZ. He will assume his new responsibilities as of 1 October 2011.

By taking these steps, we aim to meet our financial targets and increase long-term value for you, our shareholders.

Seizing opportunities despite volatile environment

Amid ongoing volatility and the moderate pace of the global economic recovery, we are seizing opportunities for growth in Swiss Re's defined areas of focus. We expect significant further potential in emerging markets such as China, Brazil and Vietnam. China is already Swiss Re's third largest market (measured in gross premiums written during the first half of the year). Within 10 years, Swiss Re economists predict that China will be the world's second largest insurance market.

Broader demographic developments relating to the ageing population in many countries present an opportunity for reinsurance companies like Swiss Re. As a market leader in longevity solutions, Swiss Re helps pension fund providers and insurance companies to cope with the risks associated with longevity.

By making the most of these opportunities in emerging markets and longevity business in addition to pursuing our traditional opportunities, Swiss Re is well-positioned to make further good progress. We are fully committed to achieving the financial targets set for 2011 to 2015.

Zurich, 4 August 2011

Walter B. Kielholz

Chairman of the
Board of Directors

Stefan Lippe

Chief Executive Officer

15 April 2011

Shareholders approve all proposed resolutions put forward by the Board of Directors at the 147th Annual General Meeting

Shareholders approved all proposed resolutions put forward by the Board with a strong majority.

5 May 2011

Swiss Re reports loss of USD 665 million for the first quarter 2011

Swiss Re reports a net loss of USD 665 million for the first quarter of 2011, compared to a profit of USD 158 million in the same period of 2010. Property & Casualty was impacted by a very high level of natural catastrophe claims, including the earthquakes in Japan and New Zealand and the floods in Australia.

1 June 2011

New Admin Re[®] transaction in the UK

Swiss Re announces that it will acquire approximately 300 000 policies and GBP 1.6 billion in assets from American Life Insurance Company. The transaction demonstrates Swiss Re's commitment to strengthening its Admin Re[®] market presence. The acquisition builds on Swiss Re's successful track record in completing more than 50 Admin Re[®] transactions globally since 1998.

9 June 2011

Swiss Re announces that it holds more than 98% of SRZ shares and will file for invalidation and delisting of remaining SRZ shares

Swiss Re announces that more than 98% of shares in Swiss Reinsurance Company Ltd ("SRZ") are held by or have been tendered to Swiss Re Ltd ("SRL") and that SRL will file a request with the competent court to invalidate the remaining SRZ shares.

15 June 2011

J Eric Smith to head Swiss Re Americas

The Directors of Swiss Re Group and the Directors of Swiss Re America Holding Corporation announce that J Eric Smith will join Swiss Re as President and CEO, Americas effective July 11, taking over from Pierre Ozendo who retires this year after more than 35 years in the insurance industry. J Eric Smith, a 30-year insurance veteran, joins Swiss Re from USAA Life Insurance Co., one of the highest rated life insurers in the US.

22 June 2011

Swiss Re's leadership structure brought into line with legal entity set-up following successful share exchange offer

Swiss Re is completing adjustments to its leadership structure to reflect the company's new legal entity set-up. Stefan Lippe will continue to lead the Group as Chief Executive Officer of Swiss Re Ltd. Christian Mumenthaler becomes CEO of its reinsurance subsidiary, Swiss Reinsurance Company Ltd (SRZ), effective 1 October 2011.

Swiss Re reported net income of USD 960 million for the second quarter of 2011, a return on equity of 15.6%. Property & Casualty delivered an excellent underwriting result with a combined ratio of 78.4%. The Life & Health result was USD 161 million. Asset Management delivered a very good performance with a return on investments of 4.3%. Shareholders' equity, excluding non-controlling interests, was USD 24.8 billion.

Group results

Swiss Re reported net income attributable to common shareholders of USD 960 million in the second quarter of 2011, compared to net income of USD 812 million in the second quarter of 2010. Earnings per share were CHF 2.55 (USD 2.80), compared to CHF 2.56 (USD 2.37) in the same period of the previous year.

During the quarter, the US dollar depreciated 6% against the British pound, and 5% against the euro, compared to average rates in the second quarter of 2010.

Premiums earned increased 13% to USD 2.8 billion for Property & Casualty, compared to the prior-year period. At constant foreign exchange rates, premiums increased 7%. The increase in premiums earned reflects the strong renewals in the first six months of 2011 and new business written, notably in Asia. Life & Health premiums and fees increased 7%.

The Group's investment income and net realised gains include the investment result from assets backing unit-linked and unitised with-profit policies. These returns are credited to policyholders' accounts and are therefore excluded from the following comments on the investment performance of the Group.

Proprietary net investment income was USD 1.3 billion, a 15% increase compared to the prior-year period. The fixed income running yield was 4.0%. In the current period investment income also benefited from mark-to-market gains from equity accounted alternative investments. The portion of these returns attributable to non-controlling interests is presented in a separate line in the Group income statement.

The Group reported proprietary net realised investment gains of USD 0.2 billion in the second quarter of 2011, compared to a gain of USD 1.0 billion in the same period of the

prior year. Net realised gains in the current period were driven by sales of government bonds and mark-to-market gains on investment and hedges of USD 248 million. Other revenues were USD 14 million in the second quarter of 2011, compared to USD 11 million in the second quarter of 2010.

Property & Casualty claims and claim adjustment expenses decreased 26% to USD 1.3 billion. At constant foreign exchange rates, claims and claim adjustment expenses decreased 29%. The second quarter of the prior year was impacted by the increased loss for the earthquake in Chile and the Deepwater Horizon claim. The combined ratio decreased to 78.4% in the second quarter of 2011 from 102.0% in the comparative period of the previous year. The decrease was largely due to improved large loss experience in the quarter and favourable net reserve development, which accounts for 12.2% points of the combined ratio.

Life & Health benefits increased 3% to USD 2.1 billion compared to the prior-year quarter. At constant foreign exchange rates, Life & Health benefits decreased 3%, reflecting favourable morbidity results, partially offset by less favourable mortality results. The benefit ratio improved to 87.0% in the second quarter of 2011, compared to 88.3% in the same period of 2010.

Return credited to policyholders reflects the investment performance on the underlying assets, mainly backing unit-linked and unitised with-profit policies, which is passed through to policyholders. In the second quarter of 2011, an investment gain of USD 0.6 billion was passed through to policyholders, compared to a loss of USD 1.6 billion in the prior-year period.

Acquisition costs decreased 3% to USD 1.0 billion, driven by a decrease in the Life & Health business segment offsetting an increase in Property & Casualty.

Administrative expenses increased 17% to USD 0.6 billion, driven by the appreciation of the CHF as well as by various growth initiatives related to the implementation of the new Group structure. Other expenses increased 66% to USD 98 million.

Interest expenses decreased 18% to USD 212 million. The reduction was mainly due to the decrease in the Group's overall debt positions and the positive effect of interest rate hedges.

As a result of the pre-tax income reported in the second quarter of 2011, the Group shows a tax charge of USD 412 million, compared to a tax charge of USD 193 million in the same period of the previous year. The tax charge on the second quarter income is mainly the result of the composition of income and losses in the various jurisdictions in which the Group operates compared to the same period in the prior year.

Total equity, including non-controlling interests, increased by USD 0.5 billion to

USD 26.6 billion at the end of June 2011, compared to the end of the prior quarter. As of 30 June 2011, non-controlling interests totalled USD 1.8 billion, compared to USD 1.7 billion as of 31 March 2011.

Shareholders' equity, which excludes non-controlling interests, increased USD 0.4 billion to USD 24.8 billion, compared to the end of the prior quarter. The net income of the period and unrealised gains of USD 0.5 billion, mostly driven by declining interest rates, more than offset the dividends payment in the second quarter of 2011.

Book value per share was CHF 60.94 or USD 72.37 at the end of June 2011, compared to CHF 65.19 or USD 71.26 at the end of the prior quarter. Book value per share is based on shareholders' equity and excludes non-controlling interests.

For the second quarter of 2011, annualised return on equity was 15.6%, compared to 3.6% for the full year of 2010 and 13.4% (annualised) for the second quarter of 2010.

¹ From 1 January 2011, non-core activities which are largely in run-off (formerly presented in the business segment Legacy) are being reported within Group items. 2010 comparatives are presented accordingly.

Property & Casualty

Property & Casualty reported operating income of USD 993 million in the second quarter of 2011, compared to USD 455 million in the same period of 2010. At constant foreign exchange rates, operating income increased USD 532 million.

The increase in operating income for the second quarter of 2011 was driven by a strong underwriting result, which reflects the continued high quality of our portfolio. It also benefited from favourable prior-year reserve development and improved large loss experience. The prior-year period was adversely affected by unfavourable natural catastrophe experience and high man-made losses, including the impact of the Deepwater Horizon loss.

Net investment income declined USD 80 million in the reporting period, compared to the second quarter of 2010, due to the reduction in the reserve base and the low yielding investment environment.

Net premiums earned increased 12.6% to USD 2.8 billion in the second quarter of 2011, compared to USD 2.5 billion in the same period of 2010. At constant foreign exchange rates, net premiums earned increased 7.1% quarter on quarter. The growth of premiums earned reflects the successful first half year renewals together with new business written, notably with large Asian clients.

The combined ratio decreased to 78.4% in the second quarter of 2011 from 102.0% in the same period of 2010. Excluding the unwind of discount, the combined ratio was 77.0% in the second quarter of 2011. The decrease in the combined ratio was largely due to the improved large loss experience in the quarter and favourable net reserve development, which accounts for 12.2 percentage points of the combined ratio decrease.

The net impact from natural catastrophes on the combined ratio in the second quarter of 2011 was 5.1%, which is 1.5% below the expected level. As a result of this and the above mentioned favourable development of prior accident years, the property combined ratio decreased 17.8% to 76.3% in the second quarter of 2011.

The absence of new large man-made losses in the second quarter of 2011, and the lower than expected claims emergence in prior accident years in Liability were the main drivers for the improved casualty combined ratio of 86.5% in the second quarter of 2011, compared to 124.8% in the second quarter of 2010.

The specialty combined ratio decreased to 81.4% in the second quarter of 2011, compared to 94.0% in the same period of 2010, mainly due to better large loss experience and favourable net impact from prior accident years in the second quarter of 2011.

The credit combined ratio was 38.5% in the second quarter of 2011, compared to 54.2% in the second quarter of 2010. Both quarters benefited from better than expected net claims experience in prior accident years.

The expense ratio increased to 12.4% in the second quarter of 2011, compared to 10.8% in the same period of 2010, mainly driven by investment in developing new business opportunities.

Life & Health

Life & Health reported operating income of USD 161 million in the second quarter of 2011, compared to USD 142 million in the prior-year period. The improvement in operating performance was driven by favourable morbidity experience and improved equity market returns as compared to the prior year, partially offset by less favourable mortality experience and increased expenses related to the strategic realignment of the organisation.

Premiums and fee income increased to USD 2.6 billion in the second quarter of 2011 from USD 2.4 billion in the same quarter of 2010. The increase was largely due to growth in the traditional life and health business, driven by growth in Asia and the Americas, offset by lower than expected premiums in Admin Re[®]. At constant foreign exchange rates, premiums and fee income rose 1.0%.

The benefit ratio improved to 87.0% in the second quarter of 2011, compared to 88.3% in the same quarter of 2010. The slightly better ratio was driven by favourable morbidity results, partially offset by less favourable mortality results. The benefit ratio now excludes variable annuities and guaranteed minimum death benefit (GMDB) business.

The management expense ratio increased to 8.7% in the second quarter of 2011, compared to 6.5% in the prior-year period. The increase is primarily due to increased costs related to the strategic realignment of Admin Re[®].

The traditional life business reported operating income of USD 98 million in the second quarter of 2011. Mortality results were better than expectations, but were lower than the favourable experience reported in the prior-year period. Variable annuity and pre-2000 GMDB results were favourable for the reporting period, but less favourable than the results in the prior-year period.

The health business operating income was USD 100 million in the second quarter of 2011, compared to USD 63 million in the same quarter of 2010. Morbidity results were favourable compared to expectations, primarily in Europe, and results improved compared to the slightly unfavourable morbidity experience in the prior-year period.

Admin Re[®] reported an operating loss of USD 37 million in the second quarter of 2011. This was primarily driven by investment costs related to the corporate segment realignment, offset by lower amortisation of the present value of future profits (PVFP) due to the improvement in equity market returns as compared to the same period in 2010.

Asset Management

Operating income for the second quarter of 2011 was USD 1.3 billion, compared to USD 1.2 billion in the same period of the prior year. The improvement was driven mainly by mark-to-market gains in alternative investments and higher investment income from government and corporate bonds.

The annualised return on investments for Asset Management was 4.3% in the second quarter of 2011, compared to 5.8% for the same period of the prior year.

The annualised total return on investments was 8.1% in the second quarter of 2011, compared to 13.2% in the same period of the prior year. Total return on investments, which includes changes in unrealised gains or losses, was driven by mark-to-market gains of USD 1.0 billion, mainly due to mark-to-market gains on government bonds during the second quarter of 2011 due to lower interest rates.

Net investment income for Asset Management increased to USD 1.1 billion in the second quarter of 2011 from USD 0.9 billion in the same period of the prior year. An increase in mark-to-market gains from equity accounted alternative investments contributed to the increase in investment income. Additionally, an increase in investment income from government and corporate bond positions more than offset a decrease in investment income from securitised products, as these positions were de-risked over the past year.

Net realised gains on investments in Asset Management were USD 224 million in the second quarter of 2011, compared to net realised investment gains of USD 325 million in the same period of the

prior year. Net realised gains in the second quarter of 2011 consisted of net realised gains on sales and mark-to-market gains and losses on investments and hedges of USD 248 million, partially offset by impairments of USD 24 million. Realised gains originated mainly from sales of government bonds.

The Group's investment portfolio increased to USD 154.1 billion at the end of June 2011, excluding unit-linked and with-profit businesses, compared to USD 146.5 billion at the end of March 2011. This increase was partially due to the impact of foreign exchange movements and net mark-to-market gains. Swiss Re's credit and rates investment portfolio increased to USD 93.1 billion at the end of June 2011 from USD 88.0 billion at the end of March 2011 due to cash committed to new investment mandates and mark-to-market gains.

Mark-to-market gains in the second quarter of 2011 increased shareholders' equity by USD 1.0 billion.

Outlook

Amid ongoing volatility and the moderate pace of the global economic recovery, Swiss Re is seizing opportunities for growth in its defined areas of focus. The Group expects significant further potential in emerging markets such as China, Brazil and Vietnam. China is already Swiss Re's third largest market (measured in gross premiums written during the first half of the year). Within 10 years, Swiss Re economists predict that China will be the world's largest insurance market.

Broader demographic developments relating to the ageing population in many countries also present an opportunity for reinsurance companies like Swiss Re. As a market leader in longevity solutions, Swiss Re helps pension fund providers and insurance companies to cope with the risks associated with longevity.

By making the most of these opportunities in emerging markets and longevity business in addition to pursuing traditional opportunities, Swiss Re is well-positioned to make further good progress. We are fully committed to achieving the financial targets set for 2011 to 2015.

¹ The CPCI was reclassified from equity to short-term debt upon termination on 4 November 2010. The final cash settlement was made in January 2011.

² The Group adopted a new accounting pronouncement, ASU No. 2009-17 (FAS167), an update to Topic 810 – Consolidation, as of 1 January 2010, which resulted in the full consolidation of certain VIEs. This resulted in a transition impact to retained earnings of USD 60 million and to net unrealised gains/losses of USD -35 million.

³ In 2011 dividends to shareholders were paid in the form of a withholding tax exempt repayment of legal reserves from capital contributions.

The accompanying notes are an integral part of the Group financial statements.

¹ From 1 January 2011, the Group presents the amortisation of deferred acquisition cost in "Depreciation, amortisation and other non-cash items". Comparatives for 2010 are presented accordingly.

² Cash used for acquisition of UBF Seguros.

³ As of 1 January 2010, the Group adopted ASU No. 2009-17 (FAS167), an update to Topic 810 – Consolidation, which resulted in the full consolidation of certain VIEs.

Interest paid was USD 635 million and USD 671 million for the six months ended 30 June 2010 and 2011, respectively. Tax paid was USD 219 million and USD 480 million for the six months ended 30 June 2010 and 2011, respectively.

The accompanying notes are an integral part of the Group financial statements.

Notes to the Group financial statements (unaudited)

1 Organisation and summary of significant accounting policies

Nature of operations

The Swiss Re Group, which is headquartered in Zurich, Switzerland, comprises Swiss Re Ltd (the parent company) and its subsidiaries (collectively, the "Swiss Re Group" or the "Group"). The Group provides reinsurance and other related products and services to insurance companies, direct clients and others worldwide through reinsurance brokers and a network of offices in over 20 countries.

Basis of presentation

The accompanying consolidated financial statements of the Swiss Re Group have been prepared in accordance with accounting principles generally accepted in the United States of America (US GAAP) and comply with Swiss law. All significant inter-company transactions and balances have been eliminated on consolidation. The year-end balance sheet data presented was derived from audited financial statements. These interim financial statements do not include all disclosures that US GAAP requires on an annual basis and therefore they should be read in conjunction with the Swiss Re Group's audited financial statements for the year ended 31 December 2010.

In the second quarter of 2011, the Swiss Re Group established a new holding company (Swiss Re Ltd) through an exchange offer. Swiss Reinsurance Company Ltd ("SRZ") shareholders were offered the opportunity to exchange their shares in SRZ for new shares in the holding company on a one-for-one basis. Effective 20 May 2011, Swiss Re Ltd became the holding company of the Swiss Re Group. Because holders of Swiss Re Ltd shares had the same beneficial ownership interests before and after the exchange offer, the exchange offer has been accounted for in a manner similar to a transaction between entities under common control (and not as a purchase event). The exchange offer did not have an impact on the consolidated financial statements of the Swiss Re Group for the periods presented because the financial statements are presented as if Swiss Re Ltd had been the parent company for such periods.

Starting with the current quarter, the scope of the Swiss Re Group consolidated financial statements and the Swiss Reinsurance Company consolidated financial statements differs due to the inclusion of the ultimate holding company, Swiss Re Ltd, and a subsidiary, Swiss Re Specialised Investment Holding, which is held directly by Swiss Re Ltd, in the Swiss Re Group financial statements. Neither Swiss Re Ltd nor Swiss Re Specialised Investment Holding is included in the Swiss Reinsurance Company consolidated financial statements. Further changes in the legal entity structure of the Swiss Re Group in the course of 2011 and 2012, to the extent operations within the Swiss Reinsurance Company consolidated group are, or are to be, transferred to Swiss Re Ltd, will lead to additional differences between the Swiss Re Group consolidated financial statements and Swiss Reinsurance Company consolidated financial statements.

More than 98% of the shares of SRZ were held by Swiss Re Ltd as of 30 June 2011. The Group filed a request with the competent court for invalidation and delisting of the remaining SRZ shares. Shareholders of invalidated shares will receive one Swiss Re Ltd share for each SRZ share, subject to applicable securities law restrictions. These financial statements were prepared as if all SRZ shares were held by Swiss Re Ltd, and hence, no non-controlling interest is shown in respect of the SRZ shares not held by Swiss Re Ltd at 30 June 2011.

Use of estimates in the preparation of financial statements

The preparation of financial statements requires management to make significant estimates and assumptions that affect the reported amounts of assets, liabilities, revenues and expenses as well as the related disclosure including contingent assets and liabilities. The Swiss Re Group's liabilities for unpaid claims and claim adjustment expenses and policy benefits for life and health include estimates for premium, claim and benefit data not received from ceding companies at the date of the financial statements. In addition, the Group uses certain financial instruments and invests in securities of certain entities for which exchange trading does not exist. The Group determines these estimates based on historical information, actuarial analyses, financial modelling, and other analytical techniques. Actual results could differ significantly from the estimates described above.

Valuation of financial assets

The fair value of the majority of the Group's financial instruments is based on quoted prices in active markets or observable inputs. These instruments include government and agency securities, commercial paper, most investment-grade corporate debt, most high-yield debt securities, exchange traded derivative instruments, most mortgage-backed and asset-backed securities and listed equity securities. In markets with reduced or no liquidity, spreads between bid and offer prices are normally wider compared to spreads in highly liquid markets. Such market conditions affect the valuation of certain asset classes of the Group, such as some asset-backed securities as well as certain derivative structures referencing such asset classes.

The Group considers both the credit risk of its counterparties, and own risk of non-performance in the valuation of derivative instruments and other over-the-counter financial assets. In determining the fair value of these financial instruments, the assessment of the Group's exposure to the credit risk of its counterparties incorporates consideration of existing collateral and netting arrangements entered into with each counterparty. The measure of the counterparty credit risk is estimated with incorporation of the observable credit spreads, where available, or credit spread estimates derived based on the benchmarking techniques where market data is not available. The impact of the Group's own risk of non-performance is analysed in the manner consistent with the aforementioned approach; with consideration of the Group's observable credit spreads. The value representing such risk is incorporated into the fair value of the financial instruments (primarily derivatives), in a liability position as of the measurement date. The change in this adjustment from period to period is reflected in realised gains and losses in the income statement.

For assets or derivative structures at fair value, the Group uses market prices or inputs derived from market prices. A separate internal price verification process, independent of the trading function, provides an additional control over the market prices or market input used to determine the fair values of such assets. Whilst management considers that appropriate values have been ascribed to such assets, there is always a level of uncertainty and judgment over these valuations. Subsequent valuations could differ significantly from the results of the process described above. The Group may become aware of counterparty valuations, either directly through the exchange of information or indirectly, for example, through collateral demands. Any implied differences are considered in the independent price verification process and may result in adjustments to initially indicated valuations. As of 30 June 2011, the Group had not provided any collateral on financial instruments in excess of its own market value estimates.

Subsequent events

Subsequent events for the current reporting period have been evaluated up to 3 August 2011. This is the date on which the financial statements are available to be issued.

Recent accounting guidance

In January 2010, the FASB issued "Improving Disclosures about Fair Value Measurements" (ASU No. 2010-06), an update to Topic 820 – Fair Value Measurements and Disclosures. This new standard implements additional disclosure requirements for the three fair value levels. As required by the update, the Group adopted some of the requirements as of 1 January 2010. The remaining requirements were adopted as of 1 January 2011 and can be found in Note 3.

In December 2010, the FASB issued "When to Perform Step 2 of the Goodwill Impairment Test for Reporting Units with Zero or Negative Carrying Amounts" (ASU No. 2010-28), an update to Topic 350 – Intangibles – Goodwill and Other. This update provides guidance under what circumstances a company is required to perform step 2 of the goodwill impairment test for reporting units with zero or negative carrying amounts. The Group adopted this guidance as of 1 January 2011. The adoption did not have an impact on the Group's financial statements.

Also in December 2010, the FASB issued "Disclosure of Supplementary Pro Forma Information for Business Combinations" (ASU 2010-29), an update to Topic 805 – Business Combinations. This update specifies that an entity should disclose revenue and earnings of the combined entity as though the business combinations that occurred during the current year had occurred as of the beginning of the comparable prior annual reporting period only. The Group adopted this update as of 1 January 2011. The adoption did not have an impact on the Group's financial statements.

2 Investments

Investment income

Net investment income by source (including unit-linked and with-profit business) for the periods ended 30 June was as follows:

USD millions	Three months ended 30 June		Six months ended 30 June	
	2010	2011	2010	2011
Fixed income securities	1 003	994	2 058	1 973
Equity securities	162	205	292	346

Gross realised losses		-10		-12
Other-than-temporary impairments	-128	-20	-254	-123
Net realised investment gains/losses on trading securities	80	77	205	73
Change in net unrealised investment gains/losses on trading securities	-1 928	263	-445	224
Other investments:				
Net realised/unrealised gains/losses	195	-40	198	-64
Foreign exchange gains/losses	332	-166	207	-60
Net realised investment gains/losses	-1 017	446	363	643

Proceeds from sales of fixed income securities available-for-sale amounted to USD 38 194 million and USD 31 666 million for the three months ended 30 June 2010 and 2011, respectively, and USD 75 222 million and USD 54 423 million for the six months ended 30 June 2010 and 2011, respectively. Sales of equity securities available-for-sale were USD 20 million and USD 494 million for the three months ended 30 June 2010 and 2011, respectively, and USD 26 million and USD 753 million for the six months ended 30 June 2010 and 2011, respectively.

Net realised investment gains/losses for the periods ended 30 June include net realised gains/losses on unit-linked and with-profit business, which are credited to policyholders.

USD millions	Three months ended 30 June		Six months ended 30 June	
	2010	2011	2010	2011
Unit-linked realised gains/losses	-1 926	177	-671	212
With-profit realised gains/losses	-83	24	20	16

Impairment on fixed income securities related to credit losses

Other-than-temporary impairments for debt securities are bifurcated between credit and non-credit components, with the credit component recognised through earnings and the non-credit component recognised in other comprehensive income. The credit component of other-than-temporary impairments is defined as the difference between a security's amortised cost basis and expected cash flows. Methodologies for measuring the credit component of impairment are aligned to market observer forecasts of credit performance drivers. Management believes that these forecasts are representative of median market expectations.

For securitised products, cash flow projection analysis is conducted integrating forward-looking evaluation of collateral performance drivers, including default rates, prepayment rates and loss severities, and deal-level features, such as credit enhancement and prioritisation among tranches for payments of principal and interest. Analytics are differentiated by asset class, product type and security-level differences in historical and expected performance. For corporate bonds and similar hybrid debt instruments, an expected loss approach based on default probabilities and loss severities expected in the current and forecast economic environment is used for securities identified as credit-impaired to project probability-weighted cash flows. Expected cash flows resulting from these analyses are discounted, and net present value is compared to the amortised cost basis to determine the credit component of other-than-temporary impairments.

A reconciliation of the other-than-temporary impairment related to credit losses recognised in earnings for the six months ended 30 June was as follows:

USD millions	2010	2011
Balance as of 1 January	1 409	829
Credit losses for which an other-than-temporary impairment was not previously recognised	108	74
Reductions for securities sold during the period	-482	-277
Increase of credit losses for which an other-than-temporary impairment has been recognised previously, when the Group does not intend to sell, or more likely than not will not be required to sell before recovery	71	25
Impact of increase in cash flows expected to be collected	-22	-44
Impact of foreign exchange movements	-61	9
Balance as of 30 June	1 023	616

Investments available-for-sale

Amortised cost or cost, fair values and other-than-temporary impairments of fixed income securities classified as available-for-sale as of 31 December 2010 and 30 June 2011 were as follows:

As of 31 December 2010 USD millions	Amortised cost or cost	Gross unrealised gains	Gross unrealised losses	Other-than- temporary impairments recognised in other comprehensive income	Fair value
Debt securities issued by governments and government agencies:

The "Other-than-temporary impairments recognised in other comprehensive income" column only includes securities with a credit-related loss recognised in earnings. Subsequent recovery in fair value of securities previously impaired in other comprehensive income is presented in the "Other-than-temporary impairments recognised in other comprehensive income" column.

Investments trading

Fixed income securities and equity securities classified as trading as of 31 December 2010 and 30 June 2011 were as follows:

USD millions	2010	2011
Debt securities issued by governments and government agencies	8 308	9 580
Corporate debt securities	2 497	2 894
Mortgage- and asset-backed securities	447	405
Fixed income securities trading	11 252	12 879
Equity securities trading	19 513	19 673

Fixed income securities and equity securities classified as trading as of 31 December 2010 and 30 June 2011 include securities held for unit-linked and with-profit business:

USD millions	2010	2011
Fixed income securities trading held for unit-linked business	2 302	2 458
Fixed income securities trading held for with-profit business	1 648	1 700
Fixed income securities trading	3 950	4 158
Equity securities trading held for unit-linked business	17 405	17 686
Equity securities trading held for with-profit business	1 135	1 111
Equity securities trading	18 540	18 797

Maturity of fixed income securities available-for-sale

The amortised cost or cost and fair values of investments in fixed income securities available-for-sale by remaining maturity as of 31 December 2010 and 30 June 2011 are shown below. Fixed maturity investments are assumed not to be called for redemption prior to the stated maturity date. As of 31 December 2010 and 30 June 2011, USD 13 107 million and USD 11 063 million, respectively, of fixed income securities available-for-sale were callable.

USD millions	2010		2011	
	Amortised cost or cost	Fair value	Amortised cost or cost	Fair value
Due in one year or less	2 342	2 379	4 567	4 628
Due after one year through five years	16 601	16 891	16 444	16 858
Due after five years through ten years	14 628	15 189	16 391	17 037
Due after ten years	30 604	31 360	31 112	31 577
Mortgage- and asset-backed securities with no fixed maturity	15 268	15 131	14 808	14 770
Total fixed income securities available-for-sale	79 443	80 950	83 322	84 870

Assets pledged

As of 31 December 2010 and 30 June 2011, investments with the carrying value of USD 1 769 million and USD 1 906 million, respectively, were on deposit with regulatory agencies in accordance with local requirements.

As of 31 December 2010 and 30 June 2011, investments (including cash and cash equivalents) with a carrying value of approximately USD 8 573 million and USD 7 664 million, respectively, were placed on deposit or pledged to secure certain reinsurance liabilities.

As of 31 December 2010 and 30 June 2011, securities of USD 12 802 million and USD 10 450 million, respectively, were pledged as collateral in securities lending transactions and repurchase agreements. The associated liabilities of USD 1 750 million and USD 7 493 million, respectively, were recognised in accrued expenses and other liabilities.

As of 30 June 2011, a real estate portfolio with a carrying amount of USD 270 million serves as collateral for short-term senior operational debt of USD 772 million.

Collateral accepted

As of 31 December 2010 and 30 June 2011, the fair value of the government bond, corporate bond and equity securities received as collateral was USD 6 539 million and USD 6 223 million, respectively. Of this, the amount that was sold or repledged as of 31 December 2010 and 30 June 2011 was USD nil million. The sources of the collateral are typically highly rated banking market counterparties.

Unrealised losses on securities available-for-sale

The following table shows the fair value and unrealised losses of the Group's fixed income securities, aggregated by investment category and length of time that individual securities were in a continuous unrealised loss position as of 31 December 2010 and 30 June 2011. As of 31 December 2010 and 30 June 2011, USD 25 million and USD 69 million, respectively, of the gross unrealised loss on equity securities available-for-sale relate to declines in value for less than 12 months, and USD nil million and USD nil million, respectively, to declines in value for more than 12 months.

As of 31 December 2010 USD millions	Less than 12 months		12 months or more		Total

During the second quarter of 2011 the Group reviewed the categorisation of fixed income securities available-for-sale between those securities that are in an unrealised loss position for less than 12 months and more than 12 months. Based on the review, the Group determined that the split, as presented in prior-period financial statements starting in the second quarter 2010, had to be revised. The split for the 2010 year-end comparative numbers is re-presented accordingly. As a result, additional fixed income securities with a fair value of USD 4 619 million and unrealised losses of USD 788 million are now shown in the unrealised loss position for more than 12 months as of 31 December 2010. These securities were presented in the unrealised loss position for less than 12 months in prior-period financial statements. The revision has no impact on net income, net equity or the balance sheet classification of the Group.

Mortgages, loans and real estate

As of 31 December 2010 and 30 June 2011, the carrying values of investments in mortgages, policy and other loans, and real estate were as follows:

USD millions	2010	2011
Policy loans	3 658	3 583
Mortgage loans	1 337	1 466
Other loans	635	700
Investment real estate	2 040	2 118

The fair value of the real estate as of 31 December 2010 and 30 June 2011 was USD 3 306 million and USD 3 619 million, respectively. The carrying value of policy loans, mortgages and other loans approximates fair value.

As of 31 December 2010 and 30 June 2011, the Group's investment in mortgages and other loans included USD 270 million and USD 275 million, respectively, of loans due from employees and USD 356 million and USD 361 million, respectively, due from officers. These loans generally consist of mortgages offered at variable and fixed interest rates.

As of 31 December 2010 and 30 June 2011, investments in real estate included USD 6 million and USD 6 million, respectively, of real estate held for sale.

Depreciation expense related to income producing properties was USD 20 million and USD 20 million for the six months ended 30 June 2010 and 2011, respectively. Accumulated depreciation on investment real estate totalled USD 528 million and USD 558 million as of 31 December 2010 and 30 June 2011, respectively.

Substantially all mortgages, policy loans and other loan receivables are secured by buildings, land or the underlying policies.

3 Fair value disclosures

Fair value, as defined by the Fair Value Measurements and Disclosures Topic, is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.

The Fair Value Measurements and Disclosures Topic requires all assets and liabilities that are measured at fair value to be categorised within the fair value hierarchy. This three-level hierarchy is based on the observability of the inputs used in the fair value measurement. The levels of the fair value hierarchy are defined as follows:

Level 1 inputs are quoted prices in active markets for identical assets or liabilities that the Group has the ability to access. Level 1 inputs are the most persuasive evidence of fair value and are to be used whenever possible.

Level 2 inputs are market based inputs that are directly or indirectly observable but not considered level 1 quoted prices. Level 2 inputs consist of (i) quoted prices for similar assets or liabilities in active markets; (ii) quoted prices for identical assets or liabilities in non-active markets (eg markets which have few transactions and where prices are not current or price quotations vary substantially); (iii) inputs other than quoted prices that are observable (eg interest rates, yield curves, volatilities, prepayment speeds, credit risks and default rates); and (iv) inputs derived from, or corroborated by, observable market data.

Level 3 inputs are unobservable inputs. These inputs reflect the Group's own assumptions about market pricing using the best internal and external information available.

The types of instruments valued, based on quoted market prices in active markets, include most US government and sovereign obligations, active listed equities and most money market securities. Such instruments are generally classified within level 1 of the fair value hierarchy. The Group does not adjust the quoted price for such instruments, even in situations where it holds a large position and a sale could reasonably impact the quoted price.

The types of instruments that trade in markets that are not considered to be active, but are valued based on quoted market prices, broker or dealer quotations, or alternative pricing sources with reasonable levels of price transparency include most government agency securities, investment-grade corporate bonds, certain mortgage- and asset-backed products, less liquid listed equities, and state, municipal and provincial obligations. Such instruments are generally classified within level 2 of the fair value hierarchy.

Exchange-traded derivative instruments typically fall within level 1 or level 2 of the fair value hierarchy depending on whether they are considered to be actively traded or not.

Certain financial instruments are classified within level 3 of the fair value hierarchy, because they trade infrequently and therefore have little or no price transparency. Such instruments include private equity, less liquid corporate debt securities and certain asset-backed securities. Certain over-the-counter derivatives trade in less liquid markets with limited pricing information, and the determination of fair value for these derivatives is inherently more difficult. Such instruments are classified within level 3 of the fair value hierarchy. Pursuant to the election of the fair value option, the Group classifies certain Life & Health policy reserves to level 3 of the fair value hierarchy. When appropriate, valuations are adjusted for various factors such as liquidity, bid/offer spreads, and credit considerations. Such adjustments are generally based on available market evidence. In the absence of such evidence, management's best estimate is used.

The fair values of assets are adjusted to incorporate the counterparty risk of non-performance. Similarly, the fair values of liabilities reflect the risk of non-performance of the Group, captured by the Group's credit spread. These valuation adjustments from assets and liabilities measured at fair value using significant unobservable inputs are recognised in net realised gains and losses. In the second quarter of 2011, these adjustments were non-material. Whenever the underlying assets or liabilities are reported in a specific business segment, the valuation adjustment is allocated accordingly. Valuation adjustments not attributable to any business segment are reported in Group items.

In certain situations, the Group uses inputs to measure the fair value of asset or liability positions that fall into different levels of the fair value hierarchy. In these situations, the Group will determine the level in which the fair value falls based upon the lowest level input that is significant to the determination of the fair value.

Valuation techniques

US government securities typically have quoted market prices in active markets and are categorised as level 1 instruments in the fair value hierarchy. Non-US government holdings are generally classified as level 2 instruments and are valued on the basis of the quotes provided by pricing services, which are subject to the Group's pricing validation reviews and pricing vendor challenge process. Valuations provided by pricing vendors are generally based on the actual trade information as substantially all of the Group's non-US government holdings are traded in a transparent and liquid market.

Corporate debt securities mainly include US and European investment-grade positions, which are priced on the basis of quotes provided by third-party pricing vendors and first utilise valuation inputs from actively traded securities, such as bid prices, bid spreads to Treasury securities, Treasury curves, and same or comparable issuer curves and spreads. Issuer spreads are determined from actual quotes and traded prices and incorporate considerations of credit/default, sector composition, and liquidity and call features. Where market data is not available, valuations are developed based on the modelling techniques that utilise observable inputs and option-adjusted spreads and incorporate considerations of the security's seniority, maturity and the issuer's corporate structure.

Values of residential mortgage-backed securities (RMBS), commercial mortgage-backed securities (CMBS) and other asset-backed securities (Other ABS) are obtained both from third-party pricing vendors and through quoted prices, some of which may be based on the prices of comparable securities with similar structural and collateral features. Values of certain ABS for which there are no significant observable inputs are developed using benchmarks to similar transactions or indices. For both RMBS and CMBS, cash flows are derived based on the transaction-specific information which incorporates priority in the capital structure and are generally adjusted to reflect benchmark yields, market prepayment data, collateral performance (default rates and loss severity) for specific vintage and geography, credit enhancements, and ratings. For certain RMBS and CMBS with low levels of market liquidity, judgments may be required to determine comparable securities based on the loan type and deal-specific performance. CMBS terms may also incorporate lock-out periods that restrict borrowers from prepaying the loans or provide disincentives to prepay and therefore reduce prepayment risk of these securities, as compared to RMBS. The factors specifically considered in valuation of CMBS include borrower-specific statistics in a specific region, such as debt service coverage and loan-to-value ratios, as well as the type of commercial property.

The category Other ABS primarily includes debt securitised by credit card, student loan and auto loan receivables. Pricing inputs for these securities also focus on capturing, where relevant, collateral quality and performance, payment patterns, and delinquencies.

The Group uses third-party pricing vendor data to value agency securitised products, which mainly include collateralised mortgage obligations (CMO) and MBS government agency securities. The valuations generally utilise observable inputs consistent with those noted above for RMBS and CMBS.

Equity securities held by the Group for proprietary investment purposes are mainly classified in levels 1 and 2. Securities classified in level 1 are traded on public stock exchanges for which quoted prices are readily available. Level 2 equities include equity investments fair valued pursuant to the fair value option election and certain hedge fund positions; all valued based on primarily observable inputs.

The category Other assets mainly includes the Group's private equity and hedge fund investments, which are made directly or via ownership of funds. Substantially all these investments are classified as level 3 due to the lack of observable prices and significant judgment required in valuation. Valuation of direct private equity investments requires significant management judgment due to the absence of quoted market prices and the lack of liquidity. Initial valuation is based on the acquisition cost, and is further refined based on the available market information for the public companies that are considered comparable to the Group's holdings in the private companies being valued, and the private company-specific performance indicators; both historic and projected. Subsequent valuations also reflect business or asset appraisals, as well as market transaction data for private and public benchmark companies and the actual companies being valued, such as financing rounds and mergers and acquisitions activity. The Group's holdings in the private equity and hedge funds are generally valued utilising net asset values (NAV), subject to adjustments, as deemed necessary, for restrictions on redemption (lock-up periods and amount limitations on redemptions).

The Group holds both exchange-traded and over-the-counter (OTC) interest rate, foreign exchange, credit and equity derivative contracts for hedging and trading purposes. The fair values of exchange-traded derivatives measured using observable exchange prices are classified in level 1. Long-dated contracts may require adjustments to the exchange-traded prices which would trigger reclassification to level 2 in the fair value hierarchy. OTC derivatives are generally valued by the Group based on the internal models, which are consistent with industry standards and practices, and use both observable (dealer, broker or market consensus prices, spot and forward rates, interest rate and credit curves and volatility indices) and unobservable inputs (adjustments for liquidity, inputs derived from the observable data based on the Group's judgments and assumptions).

The Group's OTC interest rate derivatives primarily include interest rate swaps, futures, options, caps and floors, and are valued based on the cash flow discounting models which generally utilise as inputs observable market yield curves and volatility assumptions.

The Group's OTC foreign exchange derivatives primarily include forward, spot and option contracts and are generally valued based on the cash flow discounting models utilising as main inputs observable foreign exchange forward curves.

The Group's investments in equity derivatives primarily include OTC equity option contracts on single or baskets of market indices and equity options on individual or baskets of equity securities, which are valued using internally developed models (such as Black-Scholes option pricing model, various simulation models) calibrated with the inputs, which include underlying spot prices, dividend curves, volatility surfaces, yield curves, and correlations between underlying assets.

The Group's OTC credit derivatives include index and single name credit default swaps, as well as more complex structured credit derivatives. Plain vanilla credit derivatives, such as index and single-name credit default swaps, are valued by the Group based on the models consistent with the industry valuation standards for these credit contracts, and primarily utilising observable inputs published by market data sources, such as credit spreads and recovery rates. These valuation techniques warrant classification of plain vanilla OTC derivatives as level 2 financial instruments in the fair value hierarchy.

The Group also holds complex structured credit contracts, such as collateralised debt securities (CDS) referencing MBS, certain types of collateralised debt obligation (CDO) transactions, and the products sensitive to correlation between two or more underlying parameters (CDO-squared); all of which are classified within level 3 of the fair value hierarchy. A CDO is a debt instrument collateralised by various debt obligations, including bonds, loans and CDS of differing credit profiles. In a CDO-squared transaction both the primary instrument and the underlying instruments are represented by CDOs. Generally, for CDO and CDO-squared transactions, the observable inputs such as CDS spreads and recovery rates are modified to adjust for correlation between the underlying debt instruments. The correlation levels are modelled at the portfolio level and calibrated at a transaction level to liquid benchmark rates.

Assets and liabilities measured at fair value on a recurring basis

As of 31 December 2010 and 30 June 2011, the fair values of assets and liabilities measured on a recurring basis by level of input were as follows:

As of 31 December 2010 USD millions	Quoted prices in active markets for identical assets and liabilities (Level 1)	Significant other observable inputs (Level 2)	Significant unobservable inputs (Level 3)	Impact of netting ¹	Total

¹ The netting of derivative receivables and derivative payables is permitted when a legally enforceable master netting agreement exists between two counterparties. A master netting agreement provides for the net settlement of all contracts, as well as cash collateral, through a single payment, in a single currency, in the event of default or on the termination of any one contract.

Total liabilities at fair value	-2 641	-6 884	-4 476	5 116	-8 885

¹ The netting of derivative receivables and derivative payables is permitted when a legally enforceable master netting agreement exists between two counterparties. A master netting agreement provides for the net settlement of all contracts, as well as cash collateral, through a single payment, in a single currency, in the event of default or on the termination of any one contract.

Assets and liabilities measured at fair value on a recurring basis using significant unobservable inputs (level 3)

As of 31 December 2010 and 30 June 2011, the reconciliation of the fair values of assets and liabilities measured on a recurring basis using significant unobservable inputs were as follows:

2010 USD millions	Debt securities issued by non-US governments and government agencies	Corporate debt securities	Residential mortgage-backed securities	Commercial mortgage-backed securities	Other asset-backed securities
Assets					
Balance as of 1 January 2010	82	2 085	1 302	199	2 047

Gains and losses on assets and liabilities measured at fair value on a recurring basis using significant unobservable inputs (level 3)

The gains and losses relating to the assets and liabilities measured at fair value using significant unobservable inputs (level 3) for the six months ended 30 June 2010 and 2011 were as follows:

USD millions	2010	2011
Gains/losses included in net income for the period	-371	178
Whereof change in unrealised gains/losses relating to assets and liabilities still held at the reporting date	-773	64

Other assets measured at net asset value

Other assets measured at net asset value as of 31 December 2010 and 30 June 2011 were as follows:

USD millions	2010 Fair value	2011 Fair value	Unfunded commitments	Redemption frequency (if currently eligible)	Redemption notice period
Private equity funds	646	668	512	non-redeemable	na
Hedge funds	332	334		redeemable ¹	90 – 180 days ²
Private equity direct	232	240		non-redeemable	na
Real estate funds	168	189	69	non-redeemable ³	na
Total	1 378	1 431	581		

¹ The redemption frequency varies from monthly to up to three years.

² Cash distribution can be delayed for up to three years depending on the sale of the underlyings.

³ One exception is a real estate fund that can be redeemed annually based on a 90-day notice period. This fund was fully redeemed in the second quarter of 2011.

The hedge fund investments employ a variety of strategies including global macro, relative value, and event driven strategies across various asset classes including long/short equity and credit investments.

The private equity direct portfolio consists of equity and equity-like investments directly in other companies. These investments have no contractual term and are generally held based on financial or strategic intent.

Private equity and real estate funds generally have limitations imposed on the amount of redemptions from the fund during the redemption period due to illiquidity of the underlying investments. Fees may apply for redemptions or transferring of interest to other parties. Distributions are expected to be received from these funds as the underlying assets are liquidated over the life of the fund, which is generally from ten to twelve years.

The redemption frequency of hedge funds varies depending upon the manager as well as the nature of the underlying product. Additionally, certain funds may impose lock-up periods and redemption gates as defined in the terms of the individual investment agreement.

Fair value option

The fair value option under the Financial Instruments Topic permits the choice to measure specified financial assets and liabilities at fair value on an instrument-by-instrument basis.

The Group elected the fair value option for positions in the following line items in the balance sheet:

Fixed income securities trading

The Group elected the fair value option for the specific investments acquired within a transaction. These securities are classified as debt securities under the Group's accounting policies. Upon election of the fair value option the securities were classified as trading, with changes in fair value recorded in earnings. The primary reason for electing the fair value option is to mitigate volatility in earnings as a result of using different measurement attributes. In the second quarter of 2010, these fixed income securities matured.

Equity securities trading

The Group elected the fair value option for an investment previously classified as available-for-sale within other invested assets in the balance sheet. The Group economically hedges the investment with derivative instruments that offset this exposure. The changes in fair value of the derivatives are recorded in earnings. Electing the fair value option eliminates the mismatch previously caused by the economic hedging of the investment and reduces the volatility in the income statement.

Liabilities for life and health policy benefits

The Group elected the fair value option for existing guaranteed minimum death benefit (GMDB) reserves related to certain variable annuity contracts which are classified as universal life-type contracts. The Group has applied the fair value option as the equity risk associated with those contracts is managed on a fair value basis, and it is economically hedged with derivative options in the market.

Assets and liabilities measured at fair value pursuant to election of the fair value option

Pursuant to the election of the fair value option for the items described, the balances as of 31 December 2010 and 30 June 2011 were as follows:

USD millions	2010	2011
Assets		
Fixed income securities trading	11 252	12 879
of which at fair value pursuant to the fair value option	0 ¹	0
Equity securities trading	19 513	19 673
of which at fair value pursuant to the fair value option	475	533
Liabilities		
Liabilities for life and health policy benefits	-39 551	-40 305
of which at fair value pursuant to the fair value option	-271	-257

¹ These fixed income securities matured in the second quarter of 2010. Related changes in fair values are presented in the table below.

Changes in fair values for items measured at fair value pursuant to election of the fair value option

Gains/losses included in earnings for items measured at fair value pursuant to election of the fair value option including foreign exchange impact for the six months ended 30 June 2010 and 2011 were as follows:

USD millions	2010	2011
Fixed income securities trading	-23	
Equity securities trading	-85	58
Liabilities for life and health policy benefits	-67	14
Total	-175	72

Fair value changes, interest and dividends from fixed income securities trading and equity securities trading are reported in net realised investment gains/losses. Fair value changes from liabilities for life and health policy benefits are shown in life and health benefits.

4 Derivative financial instruments

The Group uses a variety of derivative financial instruments including swaps, options, forwards, credit derivatives and exchange-traded financial futures in its trading and hedging strategies, in line with the Group's overall risk management strategy. The objectives include managing exposure to price, foreign currency and/or interest rate risk on planned or anticipated investment purchases, existing assets or liabilities, as well as locking in attractive investment conditions for future available funds.

The fair values represent the gross carrying value amounts at the reporting date for each class of derivative contract held or issued by the Group. The gross fair values are not an indication of credit risk, as many over-the-counter transactions are contracted and documented under ISDA master agreements or their equivalent. Management believes that such agreements provide for legally enforceable setoff in the event of default, which substantially reduces credit exposure.

Fair values and notional amounts of derivative financial instruments

As of 31 December 2010 and 30 June 2011, the fair values and notional amounts of the derivatives outstanding were as follows:

As of 31 December 2010 USD millions	Notional amount assets/liabilities	Fair value assets	Fair value liabilities	Carrying value assets/liabilities
Derivatives not designated as hedging instruments				
Interest rate contracts	452 349	4 646	-4 796	-150
Foreign exchange contracts	41 372	1 270	-1 201	69
Equity contracts	13 450	1 312	-710	602
Credit contracts	53 087	1 583	-1 324	259
Other contracts	28 949	423	-2 702	-2 279
Total	589 207	9 234	-10 733	-1 499
Derivatives designated as hedging instruments				
Interest rate contracts	4 582	582	-10	572
Foreign exchange contracts	3 012	30	-15	15
Total	7 594	612	-25	587
Total derivative financial instruments	596 801	9 846	-10 758	-912
Amount offset				
Where a right of setoff exists		-5 437	5 437	
Due to cash collateral		-1 123	335	
Total net amount of derivative financial instruments		3 286	-4 986	-1 700

As of 30 June 2011 USD millions	Notional amount assets/liabilities	Fair value assets	Fair value liabilities	Carrying value assets/liabilities
Derivatives not designated as hedging instruments				
Interest rate contracts	298 622	3 637	-3 764	-127
Foreign exchange contracts	31 306	1 032	-1 070	-38
Equity contracts	14 009	1 241	-705	536
Credit contracts	48 175	1 320	-1 160	160
Other contracts	26 988	430	-2 574	-2 144
Total	419 100	7 660	-9 273	-1 613
Derivatives designated as hedging instruments				
Interest rate contracts	3 154	567	-4	563
Foreign exchange contracts	2 320	167	-16	151
Total	5 474	734	-20	714
Total derivative financial instruments	424 574	8 394	-9 293	-899
Amount offset				
Where a right of setoff exists		-4 842	4 842	
Due to cash collateral		-1 048	274	
Total net amount of derivative financial instruments		2 504	-4 177	-1 673

The notional amounts of derivative financial instruments give an indication of the Group's volume of derivative activity. The fair value assets are included in other invested assets and the fair value liabilities are included in accrued expenses and other liabilities. The fair value amounts that were not offset were nil as of 31 December 2010 and 30 June 2011, respectively.

Non-hedging activities

The Group primarily uses derivative financial instruments for risk management and trading strategies. Gains and losses of derivative financial instruments not designated as hedging instruments are recorded in net realised investment gains/losses in the income statement. Gains and losses of derivative financial instruments not designated as hedging instruments were as follows:

USD millions	For the three months ended 30 June		For the six months ended 30 June	
	2010	2011	2010	2011
Derivatives not designated as hedging instruments				
Interest rate contracts	20	-107	41	-112
Foreign exchange contracts	-157	253	-84	-37
Equity contracts	556	24	292	-131
Credit contracts	118	-30	-9	-127
Other contracts	-375	-104	-47	212
Total gain/loss recognised in income	162	36	193	-195

Hedging activities

The Group designates certain derivative financial instruments as hedging instruments. The designation of derivative financial instruments is primarily used for overall portfolio and risk management strategies. As of 30 June 2010 and 2011, the following hedging relationships were outstanding:

Fair value hedges

The Group enters into interest rate and foreign exchange swaps to reduce the exposure to interest rate and foreign exchange volatility for certain of its issued debt positions. These derivative instruments are designated as hedging instruments in qualifying fair value hedges.

Gains and losses on derivative financial instruments designated as fair value hedging instruments are recorded in net realised investment gains/losses in the income statement. Gains and losses attributable to the hedged risks were as follows:

2010 USD millions	For the three months ended 30 June		For the six months ended 30 June	
	Gains/losses on derivatives	Gains/losses on hedged items	Gains/losses on derivatives	Gains/losses on hedged items
Fair value hedging relationships				
Interest rate contracts	279	-251	310	-270
Foreign exchange contracts	-227	249	-359	389
Total gain/loss recognised in income	52	-2	-49	119

2011 USD millions	For the three months ended 30 June		For the six months ended 30 June	
	Gains/losses on derivatives	Gains/losses on hedged items	Gains/losses on derivatives	Gains/losses on hedged items
Fair value hedging relationships				
Interest rate contracts	86	-80	19	-12
Foreign exchange contracts	60	-57	149	-147
Total gain/loss recognised in income	146	-137	168	-159

Hedges of the net investment in foreign operations

The Group designates non-derivative monetary financial instruments as hedging the foreign currency exposure of its net investment in certain foreign operations.

For the year ended 31 December 2010 and the six months ended 30 June 2011, the Group recorded an accumulated net unrealised foreign currency remeasurement gain of USD 171 million and a loss of USD 186 million, respectively, in shareholders' equity. These offset translation gains and losses on the hedged net investment.

Maximum potential loss

In consideration of the rights of setoff and the qualifying master netting arrangements with various counterparties, the maximum potential loss as of 31 December 2010 and 30 June 2011 was approximately USD 4 409 million and USD 3 552 million, respectively. The maximum potential loss is based on the positive market replacement cost assuming non-performance of all counterparties, net of cash collateral.

Credit risk-related contingent features

Certain derivative instruments held by the Group contain provisions that require its debt to maintain an investment-grade credit rating. If the Group's credit rating were downgraded or no longer rated, the counterparties could request immediate payment, guarantee or an ongoing full overnight collateralisation on derivative instruments in net liability positions.

The total fair value of derivative financial instruments containing credit risk-related contingent features amounted to USD 1 975 million and USD 1 744 million as of 31 December 2010 and 30 June 2011, respectively. For derivative financial instruments containing credit risk-related contingent features, the Group posted collateral of USD 335 million and USD 274 million as of 31 December 2010 and 30 June 2011, respectively. In the event of a reduction of the Group's credit rating to below investment grade, a fair value of USD 1 470 million additional collateral would have had to be posted as of 30 June 2011. The total equals the amount needed to settle the instruments immediately as of 31 December 2010 and 30 June 2011.

Credit derivatives written/sold

The Group writes/sells credit derivatives, including credit default swaps, credit spread options and credit index products, and total return swaps. The total return swaps, for which the Group assumes asset risk mainly of variable interest entities, qualify as guarantees under FASB ASC Topic 460. These activities are part of the Group's overall portfolio and risk management strategies. The events that could require the Group to perform include bankruptcy, default, obligation acceleration or moratorium of the credit derivative's underlying.

The following tables show the fair values and the maximum potential payout of the credit derivatives written/sold as of 31 December 2010 and 30 June 2011, categorised by the type of credit derivative and credit spreads, which were based on external market data. The fair values represent the gross carrying values, excluding the effects of netting under ISDA master agreements and cash collateral netting. The maximum potential payout is based on the notional values of the derivatives and represents the gross undiscounted future payments the Group would be required to make, assuming the default of all credit derivatives' underlyings.

The fair values of the credit derivatives written/sold do not represent the Group's effective net exposure as the ISDA master agreement and the cash collateral netting are excluded.

The Group has purchased protection to manage the performance/payment risks related to credit derivatives. As of 31 December 2010 and 30 June 2011, the total purchased credit protection based on notional values was USD 30 304 million and USD 26 951 million, respectively. Thereof USD 12 025 million and USD 11 434 million, respectively, were related to identical underlyings for which the Group sold credit protection. For tranching indexes and baskets, only matching tranches of the respective index were determined as identical. In addition to the purchased credit protection, the Group manages the performance/payment risks through a correlation hedge, which is established with non-identical offsetting positions.

The maximum potential payout is based on notional values of the credit derivatives. The Group enters into total return swaps mainly with variable interest entities which issue insurance-linked and credit-linked securities.

As of 31 December 2010 and 30 June 2011, the fair values and maximum potential payout of the written credit derivatives outstanding were as follows:

As of 31 December 2010 USD millions	Total fair values of credit derivatives written/sold	Maximum potential payout (time to maturity)			Total maximum potential payout

5 Deferred acquisition costs (DAC) and acquired present value of future profits (PVFP)

For the twelve months ended 31 December 2010 and the six months ended 30 June 2011, the DAC and PVFP were as follows:

2010 USD millions	DAC			PVFP
	Non-Life	Life & Health	Total	
Opening balance as of 1 January 2010	869	3 025	3 894	6 054
Deferred	1 734	313	2 047	
Effect of acquisitions/disposals and retrocessions		-212	-212	-1 154
Amortisation	-1 805	-365	-2 170	-449
Interest accrued on unamortised PVFP				247
Effect of foreign currency translation	-6	18	12	-75
Effect of change in unrealised gains/losses				-58
Closing balance as of 31 December 2010	792	2 779	3 571	4 565

2011 USD millions	DAC			PVFP
	Non-Life	Life & Health	Total	
Opening balance as of 1 January 2011	792	2 779	3 571	4 565
Deferred	1 277	110	1 387	
Effect of acquisitions/disposals and retrocessions	-10		-10	91
Amortisation	-927	-130	-1 057	-276
Interest accrued on unamortised PVFP				120
Effect of foreign currency translation	10	58	68	69
Effect of change in unrealised gains/losses				-26
Closing balance as of 30 June 2011	1 142	2 817	3 959	4 543

Retroceded DAC and PVFP may arise on retrocession of reinsurance portfolios, including reinsurance undertaken as part of a securitisation. The associated potential retrocession recoveries are determined by the nature of the retrocession agreements and by the terms of the securitisation.

6 Debt

The Group enters into long- and short-term debt arrangements to obtain funds for general corporate use and specific transaction financing. The Group defines short-term debt as debt having a maturity at the balance sheet date of less than one year and long-term debt as having a maturity of greater than one year. Interest expense is classified accordingly.

The Group's debt as of 31 December 2010 and 30 June 2011 was as follows:

USD millions	2010	2011
Senior financial debt	33	333
Senior financial debt – convertible perpetual capital instrument	3 966	0
Senior operational debt	5 018	4 393
Subordinated financial debt	1 781	1 139
Short-term debt – financial and operational debt	10 798	5 865
Senior financial debt	2 590	2 612
Senior operational debt	6 976	4 860
Subordinated financial debt	3 634	3 796
Subordinated operational debt	5 227	5 324
Long-term debt – financial and operational debt	18 427	16 592
Total carrying value	29 225	22 457
Total fair value	28 017	22 359

The Group uses debt for general corporate purposes and to fund discrete pools of operational leverage and financial intermediation assets. Operational leverage and financial intermediation are subject to asset and liability matching resulting in little to no risk that the assets will be insufficient to service and settle the liabilities. Debt used for operational leverage and financial intermediation is treated as operational debt and excluded by the rating agencies from financial leverage calculations. Certain debt positions are limited recourse, meaning the debtors' claims are limited to assets underlying the financing. As of 31 December 2010 and 30 June 2011, debt related to operational leverage and financial intermediation amounted to USD 17.2 billion (thereof USD 7.5 billion limited recourse) and USD 14.6 billion (thereof USD 6.8 billion limited recourse), respectively.

Interest expense on long-term debt

Interest expense on long-term debt for the periods ended 30 June 2010 and 2011 was as follows:

USD millions	Three months ended 30 June		Six months ended 30 June	
	2010	2011	2010	2011
Senior financial debt	16	18	36	38
Senior operational debt	93	86	179	167
Subordinated financial debt	66	59	136	115
Subordinated operational debt	59	65	121	128
Total	234	228	472	448

Long-term debt issued in 2011

The Group did not issue any long-term debt in the six months ended 30 June 2011.

Sales inducements are offered to contract holders of certain universal life and annuity products. The amounts deferred equal the sum of persistency bonuses credited to the account value plus the non-interest related increase in the persistency bonus liability. These costs are amortised in constant proportion to estimated gross profits over the life of the contract, using the credited interest rates as the discount rate. The unamortised balance of sales inducements mostly included in deferred acquisition costs as of 1 January 2010 and 2011 was USD 1 035 million and USD 1 019 million, respectively. In the course of 2010 and 2011, USD 234 million and USD 131 million, respectively, of sales inducements were deferred and USD 219 million and USD 125 million, respectively, were amortised. The unamortised balance of sales inducements as of 31 December 2010 and 30 June 2011 was USD 1 019 million and USD 1 056 million, respectively.

Policyholder dividends are recognised as an element of policyholder benefits. In the six months ended 30 June 2010 and 2011, the relative percentage of participating insurance of the life and health policy benefits was 6% and 7%, respectively. The amount of policyholder dividend expense for the three months ended 30 June 2010 and 2011 was USD 21 million and USD 13 million, respectively. For the six months ended 30 June 2010 and 2011, the policyholder dividend expense amounted to USD 50 million and USD 41 million.

8 Earnings per share

Earnings per share for the periods ended 30 June 2010 and 2011, respectively, were as follows:

USD millions (except share data)	Three months ended 30 June		Six months ended 30 June

¹ The translation from USD to CHF is shown for informational purposes only and has been calculated at the Group's average exchange rates for the three months ended 30 June 2010 and 2011, respectively, and for the six months ended 30 June 2010 and 2011, respectively.

As noted in Note 1 "Organisation and summary of significant accounting policies", as of 30 June 2011, more than 98% of the shares of SRZ were held by Swiss Re Ltd following an exchange offer undertaken on the basis of the issuance of one share of Swiss Re Ltd in return for one share of SRZ. The Group has filed a request with the competent court for invalidation of the remaining shares of SRZ not held by Swiss Re Ltd, the holders of which will receive upon invalidation Swiss Re Ltd shares, subject to applicable securities law restrictions, on a one-for-one basis. The earnings per share shown above give effect to the invalidation and thus were prepared as if the remaining SRZ shares not held by Swiss Re Ltd had been invalidated and Swiss Re Ltd had issued the corresponding Swiss Re Ltd shares to the holders of such SRZ shares.

9 Benefit plans

Defined benefit pension plans and post-retirement benefits

The Group sponsors various funded defined benefit pension plans. Employer contributions to the plans are charged to income on a basis which recognises the costs of pensions over the expected service lives of employees covered by the plans. The Group's funding policy for these plans is to contribute annually at a rate that is intended to maintain a level percentage of compensation for the employees covered. A full actuarial valuation is prepared at least every three years.

The Group also provides certain healthcare and life insurance benefits for retired employees and their dependants. Employees become eligible for these benefits when they become eligible for pension benefits.

Components of net periodic benefit cost

The components of pension and post-retirement cost for the six months ended 30 June 2010 and 2011 were as follows:

2010 USD millions	Swiss plans	Foreign plans	Other benefits	Total
Service cost (net of participant contributions)	40	6	3	49
Interest cost	41	51	7	99
Expected return on assets	-61	-53		-114
Amortisation of:				
Net gain/loss	5	7	-6	6
Prior service cost	3		-5	-2
Effect of settlement, curtailment and termination	1			1
Net periodic benefit cost	29	11	-1	39

2011 USD millions	Swiss plans	Foreign plans	Other benefits	Total
Service cost (net of participant contributions)	55	5	3	63
Interest cost	44	51	7	102
Expected return on assets	-62	-53		-115
Amortisation of:				
Net gain/loss	18	9	-6	21
Prior service cost	3		-6	-3
Effect of settlement, curtailment and termination				0
Net periodic benefit cost	58	12	-2	68

Employer's contributions for 2011

As of 30 June 2011, the Group contributed USD 92 million to its defined benefit pension plans and USD 8 million to other post-retirement plans, compared to USD 76 million and USD 7 million, respectively, in the same period of 2010.

The expected 2011 contributions to the defined benefit pension plans and to the post-retirement benefit plans, revised as of 30 June 2011 for latest information, amount to USD 144 million (30 June 2010: USD 122 million) and USD 15 million (30 June 2010: USD 14 million), respectively.

10 Information on business segments

The Group provides reinsurance, insurance and capital market solutions for clients that complement its (re)insurance offering throughout the world through its business segments. The business segments are determined by the organisational structure and by the way in which management reviews the operating result of the Group.

The Group presents three operating business segments: Property & Casualty, Life & Health and Asset Management. Items not allocated to these three business segments are included in the "Group items" column.

The Property & Casualty segment consists of the following sub-segments: Property traditional, Casualty traditional, Specialty traditional and Non-traditional business. The Property & Casualty business segment includes Property & Casualty insurance-linked securities, Environmental & Commodity Markets business and, in the Specialty traditional sub-segment, Credit Reinsurance, Bank Trade Finance, and Credit securitisations.

The Life & Health segment consists of the following sub-segments: Life traditional, Health traditional and Admin Re[®]. The Life & Health business segment includes variable annuity business and Life & Health insurance-linked securities.

The Asset Management business segment includes two separate sub-segments, Credit & Rates and Equity & Alternative Investments, resulting from the aggregation of Asset Management Risk Stripes. The Asset Management business segment includes proprietary returns on the Group's invested fixed income securities, equity securities and alternative investments.

Group items include certain costs of Corporate Centre functions not allocated to the business segments, certain foreign exchange items, interest expenses on operating and financial debt and other items not considered for the performance of the operating segments. From 1 January 2011 non-core activities which are largely in run-off (formerly presented in the business segment Legacy) are being reported within Group items. 2010 comparatives are presented accordingly.

Certain investment results, including investment income and realised gains on unit-linked business, with-profit business and reinsurance derivatives, are excluded from the performance of the Asset Management business segment and directly allocated to the Property & Casualty and Life & Health business segments.

The allocation of investment result to Property & Casualty and Life & Health is determined based on US GAAP (re)insurance liabilities. The allocation methodology applies a risk-free return to the nominal net reserves at the end of the prior quarter. The risk-free interest rate applied to the reserves is determined by currency and duration of the underlying Property & Casualty and Life & Health reserves. The "Allocation" column eliminates the calculated investment result allocated to either the Property & Casualty or the Life & Health business segments.

The accounting policies of the business segments are in line with those described in the summary of significant accounting policies (see Note 1 to the Group's annual consolidated financial statements).

11 Variable interest entities

Swiss Re Group enters into arrangements with variable interest entities (VIEs) in the normal course of business. The involvement ranges from being a passive investor to designing, structuring, and managing the VIEs. The variable interests held by the Group arise as a result of the Group's involvement in a modified coinsurance agreement, certain insurance-linked and credit-linked securitisations, swaps in trusts, debt financing and other entities, which meet the definition of a VIE.

When analysing the status of an entity, the Group mainly assesses if (1) the equity is sufficient to finance the entity's activities without additional subordinated financial support, (2) the equity holders have the right to make significant decisions affecting the entity's operations, and (3) the holders of the voting rights substantively participate in the gains and losses of the entity. When one of these criteria is not met, the entity is considered a VIE and needs to be assessed for consolidation under the VIE section of the Consolidation Topic.

The party that has a controlling financial interest is called the primary beneficiary and consolidates the VIE. An enterprise is deemed to have a controlling financial interest if it has both of the following:

- the power to direct the activities of the VIE that most significantly impact the entity's economic performance; and
- the obligation to absorb losses of the entity that could potentially be significant to the VIE or the right to receive benefits from the entity that could potentially be significant to the VIE.

The Group assesses for all its variable interests in VIEs whether it has a controlling financial interest in these entities and, thus, is the primary beneficiary. For this, the Group identifies the activities that most significantly impact the entity's performance and determines whether the Group has the power to direct those activities. In conducting the analysis, the Group considers the purpose, the design, and the risks that the entity was designed to create and pass through to its variable interest holders. In a second step, the Group assesses if it has the obligation to absorb losses or if it has the right to receive benefits of the VIE that could potentially be significant to the entity. If both criteria are met, the Group has a controlling financial interest in the VIE and consolidates the entity.

Whenever facts and circumstances change, a review is undertaken of the impact these changes could have on the consolidation assessment previously performed. When the assessment might be impacted, a reassessment to determine the primary beneficiary is performed.

Modified coinsurance agreement

The Group assumes insurance risk via a modified coinsurance agreement from a direct insurer, which qualifies as a VIE. The Group assumes the majority of the mortality and investment risk in the VIE. In addition, the Group has the power over the investment management and policyholder administration. As these are the activities that most significantly impact the entity's economic performance, the Group qualifies as the primary beneficiary and consolidates the entity. The Group will incur losses if mortality risk or the investment returns of the entity develop unfavourably.

The total assets of the modified coinsurance vehicles in which the Group is the primary beneficiary were USD 3 205 million as of 30 June 2011.

Insurance-linked and credit-linked securitisations

The insurance-linked and credit-linked securitisations transfer pre-existing insurance or credit risk to the capital markets through the issuance of insurance-linked or credit-linked securities. In insurance-linked securitisations, the securitisation vehicle assumes the insurance risk through insurance or derivative contracts. In credit-linked securitisations, the securitisation vehicle assumes the credit risk through credit default swaps. The securitisation vehicle generally retains the issuance proceeds as collateral. The collateral held predominantly consists of investment-grade securities.

Typically, the variable interests held by the Group arise through ownership of insurance-linked and credit-linked securities, or through protection provided under a total return swap for the principal of the collateral held by the securitisation vehicle.

Generally, the activities of a securitisation vehicle are pre-determined at formation. There are substantially no ongoing activities during the life of the VIE that could significantly impact the economic performance of the vehicle. Consequently, the main focus to identify the primary beneficiary is on the activities performed and decisions made when the VIE was designed. Typically, the Group is considered the primary beneficiary of a securitisation vehicle when the Group acts as a sponsor of risk passed to the VIE and enters at the same time in a total return swap with the VIE to protect the VIE's assets from market risk. Under the total return swap, the Group would incur losses when some or all of the securities held as collateral in the securitisation vehicle decline in value or default. Therefore, the Group's maximum exposure to loss equals the principal amount of the collateral protected under the total return swap.

As of 30 June 2011, the total assets of the insurance-linked and credit-linked securitisation vehicles in which the Group holds variable interests but is not the primary beneficiary were USD 5 193 million. The total assets of the vehicles in which the Group is the primary beneficiary were USD 945 million.

Swaps in trusts

The Group provides risk management services to certain asset securitisation trusts which qualify as VIEs. As the involvement of the Group is limited to interest rate and foreign exchange derivatives, Swiss Re does not have power to direct any activities of the trusts and therefore does not qualify as primary beneficiary of any of these trusts. These activities are in run-off.

Debt financing vehicles

Debt financing vehicles issue preference shares or loan notes to provide the Group with funding. The Group is partially exposed to the asset risk by holding equity rights or by protecting some of the assets held by the VIEs via guarantees or derivative contracts. The assets held by the VIEs consist of investment-grade securities, structured products, hedge fund units, derivatives and others.

Certain debt financing vehicles are consolidated as the Group has power over the investment management, considered to be the activity that most significantly impacts the entity's economic performance. In addition, the Group absorbs the variability of the investment return so that both criteria for a controlling financial interest are met.

As of 30 June 2011, the total assets of the debt financing vehicles in which the Group holds variable interests but is not the primary beneficiary were USD 2 817 million. The total assets of the vehicles in which the Group is the primary beneficiary were USD 6 164 million.

Other

The VIEs in this category were created for various purposes. Generally, the Group is exposed to the asset risk of the VIEs by holding an equity stake in the VIE or by guaranteeing a part or the entire asset value to third-party investors. A significant portion of the Group's exposure is either retroceded or hedged. The assets held by the VIEs consist mainly of private equity investments, residential real estate and other.

As of 30 June 2011, the total assets of other VIEs in which the Group holds variable interests but is not the primary beneficiary were USD 3 601 million. The total assets of the vehicles in which the Group is the primary beneficiary were USD 734 million.

The Group did not provide financial or other support to any VIEs during 2011 that it was not previously contractually required to provide.

The following table shows the total assets and liabilities on the Group's balance sheet relating to VIEs of which the Group is the primary beneficiary as of 31 December 2010 and 30 June 2011:

USD millions	2010		2011	
	Carrying value	Whereof restricted:	Carrying value	Whereof restricted:

Total liabilities	12 530	10 421	9 705	9 705

As of 30 June 2011, the consolidation of the VIEs resulted in non-controlling interests in the balance sheet of USD 402 million (31 December 2010: USD 402 million). The net non-controlling interests in income were USD –1 million and USD nil million net of tax for the six months ended 30 June 2010 and 2011, respectively.

The following table shows the total assets and liabilities in the Group's balance sheet related to VIEs in which the Group holds a variable interest but is not the primary beneficiary as of 31 December 2010 and 30 June 2011:

USD millions	2010	2011
Fixed income securities:		
Available-for-sale	60	66
Trading	9	16
Other invested assets	1 406	1 161
Premiums and other receivables	2	2
Reinsurance recoverables	1 631	1 602
Deferred acquisition costs	2	2
Total assets	3 110	2 849
Funds held under reinsurance treaties	1 614	1 582
Short-term debt	406	439
Accrued expenses and other liabilities	885	726
Total liabilities	2 905	2 747

The following table shows the Group's assets, liabilities and maximum exposure to loss as of 31 December 2010 and 30 June 2011 which are related to VIEs in which the Group holds a variable interest but is not the primary beneficiary:

USD millions	2010				2011			
	Total assets	Total liabilities	Maximum exposure to loss	Difference between exposure and liabilities	Total assets	Total liabilities	Maximum exposure to loss	Difference between exposure and liabilities
Insurance-linked/Credit-linked securitisations	1 890	1 665	2 197	532	1 870	1 607	2 150	543
Swaps in trusts	423	643	- ¹	-	287	532	- ¹	-
Debt financing	468		126	126	389		31	31
Other	329	597	1 184	587	303	608	1 244	636
Total	3 110	2 905	-¹	-	2 849	2 747	-¹	-

¹ The maximum exposure to loss for swaps in trusts cannot be meaningfully quantified due to their derivative character.

The liabilities of USD 1 607 million as of 30 June 2011 for insurance-linked and credit-linked securitisations represent funds held under reinsurance treaties.

The assets and liabilities for the swaps in trusts represent the positive and negative fair values of the derivatives the Group has entered into with the trusts.

Liabilities are recognised for certain debt financing VIEs when losses occur. To date the respective debt financing VIEs have not incurred any losses. Liabilities of USD 608 million recognised for the "Other" category relate mainly to collateral received.

General impact of adverse market conditions

Since 2007, the global financial markets have experienced extreme volatility and disruption, due in large part to turmoil affecting the liquidity of the banking system and the market reaction thereto. The impact of the turmoil in the financial markets was exacerbated by adverse macro-economic trends affecting a number of the principal economies. Volatility and disruption reached unprecedented levels in 2008 to 2009. Concerns remain regarding the financial markets and the health of major economies, driven in part by concerns over the sovereign debt of Greece, Ireland, Portugal, Spain and Italy and concerns over the pace of economic recovery. It is difficult to predict what the impact of market and economic conditions will be on the Group from a general business perspective or from a capital or liquidity perspective were conditions to deteriorate again or were austerity or stimulus measures adopted by governments in response to budget deficits and adverse economic conditions to be unsuccessful or counterproductive.

Swiss Re and its subsidiaries are regulated in a number of jurisdictions in which they conduct business. New legislation as well as changes to existing legislation have been proposed and/or recently adopted in a number of jurisdictions that are expected to alter, in a variety of ways, the manner in which the financial services industry is regulated. Although it is difficult to predict which proposals will become law and when and how new legislation ultimately will be implemented by regulators (including in respect of the extra-territorial effect of reforms), it is likely that significant aspects of existing regulatory regimes governing financial services will change. These may include changes as to which governmental bodies regulate financial institutions, changes in the way financial institutions generally are regulated, enhanced governmental authority to take control over operations of financial institutions, restrictions on the conduct of certain lines of business, changes in the way financial institutions account for transactions and securities positions, changes in disclosure obligations and changes in the way rating agencies rate the creditworthiness and financial strength of financial institutions.

While many changes will impact banking institutions, some could have direct applicability to insurance or reinsurance operations and others could have a general impact on the regulatory landscape for financial institutions, which might indirectly impact capital requirements and/or required reserve levels or have other direct or indirect effects on the Group. Changes are particularly likely to impact financial institutions designated as "systemically important", which designation is expected to result in enhanced regulatory supervision and heightened capital, liquidity and diversification requirements under evolving reforms. Although, to date, the focus of reforms in respect of systemically important financial institutions principally has been on banks, there is an emerging focus on insurance companies as well. Swiss Re could be designated as a global systemically important financial institution. In addition, there appears to be a trend towards a more coordinated, centralised and stricter approach to insurance regulation specifically, in both the EU and the US. For example, a pan-European regulator for insurance companies, the European Insurance and Occupational Pension Authority, gained its regulatory powers on 1 January 2011 and will be able to overrule national regulators in certain circumstances. In the US, as a possible step towards federal oversight of insurance, the US Congress created the Federal Insurance Office within the Department of Treasury.

Changes may also occur in areas of broader application, such as competition policy and tax laws. Any number of these changes could apply to the Group and its operations. These changes could increase the costs of doing business, reduce access to liquidity, limit the scope of business or affect the competitive balance, or could make reinsurance less attractive to primary insurers.

Market risk

Volatility and disruption in the global financial markets can expose the Group to significant financial and capital markets risk, including changes in interest rates, credit spreads, equity prices and foreign currency exchange rates, which may adversely impact the Group's financial condition, results of operations, liquidity and capital position. The Group's exposure to interest rate risk is primarily related to the market price and cash flow variability associated with changes in interest rates. Exposure to credit spreads primarily relates to market price and cash flow variability associated with changes in credit spreads. When credit spreads widen, the net unrealised loss position of the Group's investment portfolio can increase, as could other-than-temporary impairments. With respect to equity prices, the Group is exposed to changes in the level and volatility of equity prices, as they affect the value of equity securities themselves as well as the value of securities or instruments that derive their value from a particular equity security, a basket of equity securities or a stock index. The Group is also subject to equity price risk to the extent that the value of life-related benefits under certain life contracts, most notably variable annuity business, is tied to financial market values; to the extent market values fall, the financial exposure on guarantees related to these contracts would increase to the extent this exposure is not hedged. While the Group has discontinued writing new variable annuity business and has an extensive hedging programme covering its existing variable annuity business, certain risks cannot be hedged, including actuarial risks, basis risk and correlation risk. Exposure to foreign exchange risk arises from exposures to changes in spot prices and forward prices as well as to volatile movements in exchange rates.

These risks can have a significant effect on investment returns, which in turn may affect both the Group's results of operations and financial condition. The Group continues to focus on asset-liability management for its investment portfolio, but pursuing even this strategy has its risks – including possible mismatch – that in turn can lead to reinvestment risk. The Group seeks to manage the risks inherent in its investment portfolio by repositioning the portfolio from time to time, as needed, and to reduce risk and fluctuations through the use of hedges and other risk management tools. The Group has reduced risk to the portfolio by repositioning the components of the portfolio and, as a result, profitability could potentially be impacted, and, unless offset by underwriting returns, could be reduced.

Credit risk

Like other financial institutions, the Group was adversely impacted by the deterioration in the credit markets in 2008 – 2009. Although the Group has taken significant steps to de-risk its portfolio and reposition its assets, if the credit markets were again to deteriorate and further asset classes were to be impacted, the Group could experience further losses. Changes in the market value of the underlying securities and other factors impacting their price could give rise to market value losses. If the credit markets were to deteriorate again, the Group could face further write-downs in other areas of its portfolio, including other structured instruments, and the Group and its counterparties could once again face difficulties in valuing credit-related instruments. Differences in opinion with respect to valuations of credit-related instruments could result in legal disputes among counterparties as to their respective obligations, the outcomes of which are difficult to predict and could be material.

Liquidity risks

The Group's business requires, and its clients expect, that it has sufficient capital and sufficient liquidity to meet its reinsurance obligations, and that that would continue to be the case following the occurrence of any event or series of events, including extreme catastrophes, that would trigger insurance or reinsurance coverage obligations. The Group's uses of funds include obligations arising in its reinsurance business (including claims and other payments as well as insurance provision repayments due to portfolio transfers, securitisations and commutations), which may include large and unpredictable claims (including catastrophe claims), funding of capital requirements and operating costs, payment of principal and interest on outstanding indebtedness and funding of acquisitions. The Group also enters into contracts or trading arrangements that could give rise to significant short-term funding obligations and, in connection with the Group's trading operations, it could be subject to unexpected calls to deliver collateral or unwind trading positions at a net cost to it. The Group also has unfunded capital commitments in its private equity and hedge fund investments, which could result in funding obligations at a time when it is subject to liquidity constraints.

The Group manages liquidity and funding risks by focusing on the liquidity stress that is likely to result from extreme capital markets scenarios or from extreme insurance events or combinations of the two. Generally, the ability to meet liquidity needs could be adversely impacted by factors that the Group cannot control, such as market dislocations or interruptions, adverse economic conditions, severe disruption in the financial and worldwide credit markets and the related increased constraints on the availability of credit and changes in interest rates, foreign exchange rates and credit spreads, or by perceptions among market participants of the extent of the Group's liquidity needs.

The Group may not be able to secure new sources of liquidity or funding, should projected or actual liquidity fall below levels it requires. The ability to meet liquidity needs through asset sales may be constrained by market conditions and the related stress on valuations and through third-party funding may be limited by constraints on the general availability of credit and willingness of lenders to lend. In addition, the Group's ability to meet liquidity needs may also be constrained by regulatory requirements that require regulated entities to maintain regulatory capital, or that restrict intra-group transactions, the timing of dividend payments from subsidiaries or the fact that certain assets may be encumbered or otherwise non-tradable. Finally, any adverse ratings action could trigger a need for further liquidity (for example, by triggering termination provisions or collateral delivery requirements in contracts to which the Group is a party) at a time when the Group's ability to obtain liquidity from external sources is limited by such ratings action.

Counterparty risks

The Group's general exposure to counterparty risk was heightened during the credit crisis, and this risk could still be exacerbated to the extent defaults, or concerns about possible defaults, by certain market participants trigger more systemic concerns about liquidity. Losses due to defaults by counterparties, including issuers of investment securities (which include structured securities) or derivative instrument counterparties, could adversely affect the Group. In addition, trading counterparties, counterparties under swaps and other derivative contracts and financial intermediaries may default on their obligations due to bankruptcy, insolvency, lack of liquidity, adverse economic conditions, operational failure, fraud or other reasons, which could also have a material adverse impact on the Group.

The Group could also be adversely affected by the insolvency of, or other credit constraints affecting, counterparties in its reinsurance operations. Moreover, the Group could be adversely affected by liquidity issues at ceding companies or at third parties to whom the Group has retroceded risk, and such risk could be exacerbated to the extent any such exposures are concentrated. The Group's most significant single counterparty risk is in respect of Berkshire Hathaway Inc., with which it has a quota share arrangement, an adverse development cover and a retrocession arrangement in respect of a closed block of US individual life reinsurance business.

Risks relating to credit rating downgrades

Ratings are an important factor in establishing the competitive position of reinsurance companies, and market conditions could increase the risk of downgrade. Third-party rating agencies assess and rate the financial strength of reinsurers and insurers, such as Swiss Re. These ratings are intended to measure a company's ability to repay its obligations and are based upon criteria established by the rating agencies.

The Group's ratings reflect the current opinion of the relevant rating agencies. One or more of its ratings could be downgraded or withdrawn in the future. Rating agencies may heighten their scrutiny of rated companies, increase the frequency and scope of ratings reviews, revise their criteria or take other actions that may negatively impact the Group's ratings. In addition, changes to the process or methodology of issuing ratings, or the occurrence of events or developments affecting the Group, could make it more difficult for the Group to achieve improved ratings which it would otherwise have expected.

As claims paying and financial strength ratings are key factors in establishing the competitive position of reinsurers, a decline in ratings alone could make reinsurance provided by the Group less attractive to clients relative to reinsurance from competitors with similar or stronger ratings. A decline in ratings could also cause the loss of clients who are required by either policy or regulation to purchase reinsurance only from reinsurers with certain ratings. A decline in ratings could also impact the availability of unsecured financing and obligate the Group to provide collateral or other guarantees in the course of its reinsurance business or trigger early termination of funding arrangements. Any rating downgrades could also have a material adverse impact on the Group's costs of borrowing and limit its access to the capital markets. Further negative ratings action could also impact reinsurance contracts.

Legal and regulatory risks

The Group has been named, from time to time, as a defendant in various legal actions in connection with its operations. The Group is also involved, from time to time, in investigations and regulatory proceedings, certain of which could result in adverse judgments, settlements, fines and other outcomes. The number of these investigations and proceedings involving the financial services industry has increased in recent years, and the potential scope of these investigations and proceedings has also increased, not only in respect of matters covered by our direct regulators, but also in respect of compliance with broader business conduct rules such as market abuse regulations, anti-bribery legislation, anti-money laundering legislation and trade sanctions legislation. The Group could also be subject to risk from potential employee misconduct, including non-compliance with internal policies and procedures. Substantial legal liability could materially adversely affect the Group's business, financial condition or results of operations or could cause significant reputational harm, which could seriously harm its business.

Insurance, operational and other risks

As part of the Group's ordinary course operations, the Group is subject to a variety of risks, including risks that reserves may not adequately cover future claims and benefits, risks that catastrophic events (including hurricanes, windstorms, floods, earthquakes, industrial accidents, explosions, industrial actions, fires and pandemics) may expose the Group to unexpected large losses, competitive conditions, cyclicity of the industry, risks related to emerging claims and coverage issues, risks arising from the Group's dependence on policies, procedures and expertise of ceding companies, risks related to investments in emerging markets, and risks related to the failure of operational systems and infrastructure. In addition, the occurrence of future risks that the Group's risk management procedures fail to identify or anticipate could have a material adverse effect on the Group. Any of the foregoing, as well as other concerns in respect of the Group's business, could also give rise to reputational risk.

Use of models; accounting matters

The Group is subject to risks relating to the preparation of estimates and assumptions that management uses, for example, as part of its risk models as well as those that affect the reported amounts of assets, liabilities, revenues and expenses in the Group's financial statements, including assumed and ceded business. For example, the Group estimates premiums pending receipt of actual data from ceding companies, which actual data could deviate from the estimates. In addition, particularly with respect to large natural catastrophes, it may be difficult to estimate losses, and preliminary estimates may be subject to a high degree of uncertainty and change as new information becomes available. To the extent that management's estimates or assumptions prove to be incorrect, it could have a material impact on underwriting results (in the case of risk models) or on reported financial condition or results of operations, and such impact could be material.

The Group's results may be impacted by changes in accounting standards, or changes in the interpretation of accounting standards. The Group's results may also be impacted if regulatory authorities take issue with any conclusions the Group may reach in respect of accounting matters. Changes in accounting standards could impact future reported results or require restatement of past reported results.

The Group uses non-GAAP financial measures in its external reporting, including in this report. These measures are not prepared in accordance with US GAAP or any other comprehensive set of accounting rules or principles, and should not be viewed as a substitute for measures prepared in accordance with US GAAP. Moreover, these may be different from or otherwise inconsistent with non-GAAP financial measures used by other companies. These measures have inherent limitations, are not required to be uniformly applied and are not audited.

Risks related to our structure

Swiss Re Ltd is a holding company, a legal entity separate and distinct from its subsidiaries, including Swiss Reinsurance Company Ltd. As a holding company with no operations of its own, Swiss Re Ltd is dependent upon dividends and other payments from Swiss Reinsurance Company Ltd to enable it to pay dividends to its shareholders. No such dividends would be paid in any event by Swiss Reinsurance Company Ltd prior to the time that it becomes wholly owned by Swiss Re Ltd, which is expected to occur in November 2011.

Cautionary note on forward-looking statements

Certain statements and illustrations contained herein are forward-looking. These statements and illustrations provide current expectations of future events based on certain assumptions and include any statement that does not directly relate to a historical fact or current fact.

Forward-looking statements typically are identified by words or phrases such as “anticipate”, “assume”, “believe”, “continue”, “estimate”, “expect”, “foresee”, “intend”, “may increase” and “may fluctuate” and similar expressions or by future or conditional verbs such as “will”, “should”, “would” and “could”. These forward-looking statements involve known and unknown risks, uncertainties and other factors, which may cause Swiss Re’s actual results, performance, achievements or prospects to be materially different from any future results, performance, achievements or prospects expressed or implied by such statements. Such factors include, among others:

- further instability affecting the global financial system and developments related thereto;
- changes in global economic conditions;
- Swiss Re’s ability to maintain sufficient liquidity and access to capital markets, including sufficient liquidity to cover potential recapture of reinsurance agreements, early calls of debt or debt-like arrangements and collateral calls under derivative contracts due to actual or perceived deterioration of Swiss Re’s financial strength;
- the effect of market conditions, including the global equity and credit markets, and the level and volatility of equity prices, interest rates, credit spreads, currency values and other market indices, on Swiss Re’s investment assets;
- changes in Swiss Re’s investment result as a result of changes in its investment policy or the changed composition of its investment assets, and the impact of the timing of any such changes relative to changes in market conditions;
- uncertainties in valuing credit default swaps and other credit-related instruments;
- possible inability to realise amounts on sales of securities on Swiss Re’s balance sheet equivalent to its mark-to-market values recorded for accounting purposes;
- the outcome of tax audits, the ability to realise tax loss carryforwards and the ability to realise deferred tax assets (including by reason of the mix of earnings in a jurisdiction or deemed change of control), which could negatively impact future earnings;
- the possibility that hedging arrangements may not be effective;
- the lowering or loss of financial strength or other ratings of one or more of the companies in the Group or developments adversely affecting the ability to achieve improved ratings;
- the cyclical nature of the reinsurance industry;
- uncertainties in estimating reserves;
- uncertainties in estimating future claims for purposes of financial reporting, particularly with respect to large natural catastrophes, as significant uncertainties may be involved in estimating losses from such events and preliminary estimates may be subject to change as new information becomes available;
- the frequency, severity and development of insured claim events;
- acts of terrorism and acts of war;
- mortality and morbidity experience;
- policy renewal and lapse rates;
- extraordinary events affecting Swiss Re’s clients and other counterparties, such as bankruptcies, liquidations and other credit-related events;
- current, pending and future legislation and regulation affecting Swiss Re or its ceding companies, and regulatory or legal actions;
- changes in accounting standards;
- significant investments, acquisitions or dispositions, and any delays, unexpected costs or other issues experienced in connection with any such transactions, including, in the case of acquisitions, issues arising in connection with integrating acquired operations;
- changing levels of competition;
- operational factors, including the efficacy of risk management and other internal procedures in managing the foregoing risks; and
- challenges in implementation, adverse responses of counterparties, regulators or rating agencies, or other issues arising from, or otherwise relating to, the changes in Swiss Re’s corporate structure.

These factors are not exhaustive. Swiss Re operates in a continually changing environment and new risks emerge continually. Readers are cautioned not to place undue reliance on forward-looking statements. Swiss Re undertakes no obligation to publicly revise or update any forward-looking statements, whether as a result of new information, future events or otherwise.
